

# Veneer Inserts

## SUPERIOR PANELS

Northern Contours expertly manufactures membrane pressed veneer inserts for a variety of uses, including kitchen cabinet doors, passage doors, office and residential furniture and architectural millwork.

The quality and consistency of our profiles distinguishes our products in the industry. Attention to detail means excellent corner definition and a panel that will fit flawlessly into your door profile. Only the highest grade logs are used for veneer panels, giving you a beautiful product that finishes evenly for a uniform look.

For a truly superior appearance without splice lines, our new wide stave option is available on select species. Outsourcing quality veneer inserts from Northern Contours will save you time and money while affording you the resources necessary to increase door production.

# Veneer Inserts

## Benefits

- **Stability** | Veneer panels are designed to maintain their size and will not expand and contract with seasonal humidity.
- **Uniformity** | Grain and color consistency are easier to achieve with veneer than hardwood for more uniform staining. Veneer inserts are carefully centered and balanced to create a pleasing appearance.
- **Premium Product** | Defects can be more easily removed with veneer than with hardwood panels resulting in a superior product.
- **Environmentally Friendly** | Veneer gives us greater yield from diminishing hardwood resources.
- **Time Saving** | Veneer panels arrive to you sanded and ready for finishing. Outsourcing veneer panels allows manufacturers to increase door production.

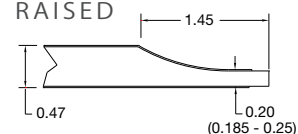

## Profile Specifications

- Wide stave and straight grain options on select species.
- Square, arch and cathedral styles.
- Variable tongue thickness range shown in parenthesis.
